

Welcome to the NHS Wound Management Center. We are fortunate to have you as one of our patients. Please take a moment to read a quick note from the CENTER'S MEDICAL DIRECTOR and our CHIEF OF STAFF, DR. BRENT ROTTON.

---

**YOU ARE AN IMPORTANT MEMBER OF YOUR WOUND CARE TEAM.**

---

Dr. Rotton wants you to know that he and his team will do their best to help your wound heal quickly and completely. However, they need you to take an active role in caring for your wound. "The healing process involves many factors. Our team will teach each patient what it takes to promote wound healing. It's much more than changing a bandage. The success of wound healing depends on the patient's level of commitment and environment."

# WOUND MANAGEMENT

# WHAT IS HYPERBARIC OXYGEN THERAPY

Hyperbaric Oxygen Therapy is a medical treatment in which the **PATIENT BREATHES 100% OXYGEN** while inside a chamber under pressure. This environment increases the oxygen content in the body by **10-20 times**. HBOT is used as one part of an overall treatment plan, including surgery, antibiotics, and other therapies.
